published:27 Sep 2016 views:2204 Make sure you watch this one! From the University of California, Berkeley: UCB: Subscribe to the UCB Channel: Assignment 6.3A-Given the fact that intelligent design involves several scarce resources including critical thinking, scientific expertise, and lack of bias, methods to detect and test for intelligent design are nearly impossible. Thus, many of those who subscribe to the intelligent design viewpoint see themselves as “gifted” or “lucky” to see and participate in the intelligent design movement, as they’ll be around to see the next great step in the development of human kind. In reality, the intelligent design movement is nothing but an effort to replace the theory of evolution

with the theory of intelligent design and replace the authority of the scientific method with a supernatural “first cause.” That claim of theirs is a form of faith and they use the claim to discredit all science and to argue against the theory of evolution. Since the Intelligent Design (ID) movement mainly concerns itself with the origin of life, and presents a model of the universe that denies evolution, the struggle between “ID” and “evolution” is a struggle between science and faith. In his book *DarwinRetried*, Stephen C. Meyer argues that the theory of evolution can be rehabilitated from its near-obliteration through the use of philosophical and scientific arguments.
